

Mounting instruction for GPS 4500

Please always follow the instructions as stated below.

Remove GPS 4500 from the mounting bracket:

When removing the housing, carefully raise all 3 “clips” with the screwdriver by approx. 1 mm (approx. 0.039 inches) until the housing is freely moveable on top.

1 Get the GPS 4500 incl. the mounting bracket ready.

- housing
- mounting bracket
- mounting screws

2 Mounting step 1

Feed the cable (10m/100m or 32.80 feet/328 feet) into the mounting bracket. Insert the cable into the mounting bracket prior to mounting. Do not feed the cable in coiled condition through the mounting bracket.

3 Mounting step 2

Fasten the mounting bracket on the wall. Do not fasten the housing on the mounting bracket.

4 Mounting step 3

The housing must be placed from the top into the mounting bracket as straight as possible. It should not be placed crooked or lopsided into the mounting bracket. There is a risk that the mounting bracket could break. As soon as the housing is placed over the snaps, the housing is easily and without force snapped into the mounting bracket. The housing cannot be placed into the mounting bracket from below.
